

Cancer Treatment Program

3-Week Program \$44,700 USD

Includes room tax. Mexican residents add 8% VAT.

We recognize cancer as a severe degenerative disease. The Sanoviv Cancer Treatment Program is designed to address the root cause of the disease and provide healing support to your whole body. Our integrative approach uses the best of cutting-edge, science-based therapies and technology combined with nutrition, supplementation, detoxification, and natural medicine. We intend to add healthy, disease-free years to your life.

Sanoviv can help you understand cancer from a different perspective: one of hope, care, and respect. This perspective includes options that make sense and ensure you're a full partner in your healing. Even though cancer is a severe disease, it can often be overcome. Your team of doctors, nutritionists, specialists, psychologists, biological dentists, chiropractors, imaging technicians, fitness experts, and spa therapists is ready for the challenge to help you achieve excellent health and healing.

We believe in a balanced approach to cancer therapies and use a natural approach to promote healing by supporting the body's defense systems whenever possible. Our practitioners draw from the best alternative, complementary, and conventional therapies. Many of our natural and biological therapies have their roots in Europe, where they have been practiced for decades.

At Sanoviv, you are assigned a 7-member team to work with you, including a medical doctor, nutritionist, psychologist, chiropractor, biological dentist, fitness professional, and bioenergetic specialist. Experience a completely integrated team to assess and recommend solutions for your health concerns. Together, we take a whole-body approach to your wellness and offer everything under one roof, in a beautiful healing environment. From nutritious, prepared meals to advanced alternative therapies, Sanoviv takes care of everything so you can focus on feeling better.

Improving the Quality of Your Life!

Our most important mission as a world-class cancer treatment hospital is improving your health. Sanoviv's ongoing scientific research and development contribute to an advanced understanding of each patient's unique prognosis and offer an individualized approach for each patient. Advanced screening techniques, localized therapies, and systemic immunotherapies, in addition to the availability of many specifically targeted treatments, have reduced cancer mortality and improved outcomes.

Sanoviv is committed to elevating the standard of cancer treatment by providing:

- Highly trained medical doctors, skilled in Functional Medicine, conventional medicine, and alternative cancer care
- An on-site staff oncologist who oversees all treatments, focusing on immunotherapy
- An integrative team approach, where all of our medical practitioners collaborate to select treatment priorities
- A surgical oncologist who performs most surgeries in our on-site operating suite
- Continuous cancer research and education for the most up-to-date cancer information
- Evidence-based treatment programs consistent with established guidelines
- Options for genetic assessment, counseling, and palliative care services
- An unparalleled collection of state-of-the-art diagnostics, equipment, and treatments
- Patient-centered psychology services to help with the stress of illness
- Professional and high-level quality care
- Follow-up care by phone and email through our Aftercare Department for one full year

At Sanoviv, instead of treating just the disease, we treat the whole person who has the disease.

Customized Program Includes:

- Laboratory Tests (see list)
- Electrocardiogram (EKG)
- Imaging (Ultrasound, X-Ray, CT Scan)
- Chest X-ray (if indicated)
- Medical Consultations (3x a week with oncologist, 2x a week with assigned doctor)
- Specialist Consultations
- Nutrition Assessment & Consultations
- Psychology Consultation & Sessions
- Chiropractic Assessment & Follow-up
- Dental Evaluation with Panorex X-ray, Explanation of Results, and Neural Therapy
- Fitness Assessment & Individual Sessions
- Mind-Body Therapy Sessions
- Subclavian Catheter Placement (if indicated)
- Ozone Therapy
- Hyperbaric Oxygen Therapy
- Selected patient-specific Immunotherapies as indicated by the doctor (see below)
- Macrophage Targeting Therapy (up to 9 IVs)
- T-Cell Modulation Therapy (TCM) Spray
- Whole-body Hyperthermia*
- Regional Hyperthermia*
- Colon Hydrotherapy**
- IV Vitamin C (not corn-derived)
- IV Chelation (EDTA)
- IV Nutrition Therapy
- IV Methylene Blue
- IV Amygdalin (B-17)
- Some Nutritional Supplements (if indicated)***
- Bioenergetic Therapies (Rife, Ondamed, BEMER, and more)
- Max Pulse (HRV & Vessel Health Assessment)
- Bioimpedance Analysis (body composition)

- Morning Meditations
- Food Preparation Demonstrations
- Fitness Classes (stretching, rebounding, water fitness, yoga, and light strength as available)
- Lectures (nutrition, detox, breathing)
- Three Weeks Oceanfront Accommodations
- All Meals (whole food, gluten-free, dairy-free)
- 12 Months of Aftercare Support

Laboratory Tests

- Comprehensive Metabolic Panel
- Complete Blood Count (CBC)
- C-Reactive Protein
- Glycated Hemoglobin (HbA1c)
- Urine and Stool Analysis
- Blood Type
- Vitamin D (25-hydroxy)
- Sedimentation Rate (ESR)
- Ferritin (iron)
- Tumor Markers

Some laboratory tests are repeated twice during the program.

Medical Spa Treatments

- Swedish Massage
- Lymphatic Drainage Massage
- Reflexology
- Craniosacral Therapy
- Matrix Regeneration Therapy
- Parafango Treatments
- Seaweed and Fango Body Wraps
- Infrared Sauna and Thalassotherapy

“We believe in the team approach to healing, in a low-toxin environment.”

* All rings and piercings must be removed before you can receive hyperthermia treatment. Please make sure these are removed before you arrive or can be easily removed before the procedure.

** Colon Hydrotherapy is not available for guests 65 and older, due to a higher risk of complications. Alternate detox therapies may be substituted with your doctor's consent.

*** Some oral supplements and medications are included. For those that are not included, our accounting department will alert you.

Key Program Features

We use many therapeutic interventions to enhance your body's ability to destroy cancer cells while respecting the integrity of normal, healthy cells. Our goal is to slow or stop the progression of the disease while improving the quality and length of life. Treatments are designed to change the tumor microenvironment and impact known cancer, while also addressing cancer stem cells and circulating tumor cells that can lead to recurrences or metastasis of cancer. These interventions are combined with supportive therapies to enhance their potency and reduce side effects. Specific protocols are used to administer the correct treatment at the right dose, at the exact time and frequency, to produce the best possible results. Your Sanoviv oncologist will carefully review your case and adjust the plan to create a full, intensive treatment course for you, ensuring the most effective and targeted care for your specific situation.

Immunotherapies

Immunotherapies are the centerpiece of our cancer treatment programs. Immunotherapy refers to any treatment or therapy that works in conjunction with, or supports, the body's own natural immune system. (By contrast, some conventional treatments can weaken the body's natural immune defenses, which can lead to recurrences.) Each treatment is made using the patient's own immune cells. The specific type of immunotherapy each patient receives is selected to fit his or her unique situation by our on-site oncologist. For many patients, our immunotherapies have resulted in long-lasting, positive clinical responses — even in those whose tumors were resistant to conventional therapies. Current research suggests that cancer cells can continuously suppress the body's immune response. So, therapies that support the immune system are a priority. Using the patient's own immune cells means no toxicity to healthy tissues.

How Sanoviv Creates Immune Therapies

The researchers in our immunology lab have developed patient-specific immunotherapies that have proven highly effective for many people. They are produced on-site in a controlled environment to ensure the highest potency. They are administered intravenously (IV), subcutaneously (under the skin), or injected near the tumor, depending on the specific case. First, they take a blood sample from the patient and isolate the person's immune cells until they have a viable sample of the immune cell type indicated by the doctor. These cells are then activated by cancer-specific peptides and finally cultured to create an army of activated cells, often as many as one million cells with up to 98% viability — ready to fight the cancer. The idea is to let the body progress using its natural pathways.

The following are examples of immunotherapies that may be used as part of your cancer treatment.

Dendritic Cell Therapy - Dendritic cells are a vital part of the body's immune system. Their main job is to detect abnormal or foreign cells—such as cancer cells—and alert the rest of the immune system to destroy them. Due to this unique role, dendritic cells can be used as a powerful form of cancer immunotherapy that uses your own cells to strengthen your immune system's ability to recognize and fight cancer.

Tumor Infiltrating Lymphocyte (TILS) Therapy - Tumor-infiltrating lymphocytes (TILS) are isolated from the individual's body, then cultured using specific proteins to engage an immune response targeted to your cancer type. TILS therapy is often selected when dealing with hormone-based cancers such as uterine or prostate cancer, but it's also effective for many others. TILS is often combined with NK Cell therapy.

Natural Killer (NK) Cell Therapy - NK cells, also known as Natural Killer Cells, are a type of lymphoid cell that comprises about 5-15% of circulating blood cells. They are part of an individual's innate immune system, known for their remarkable tumor cell-killing abilities in laboratory studies. Peripheral mononuclear cells (PBMC) are isolated from the patient's body, then cultured and matured into natural killer (NK) cells. Existing NK cells can also be multiplied in culture to create a larger army.

Tumor-Specific Antigen Therapy - Tumor-Specific Antigens (TSAs) are immunotherapy treatments created from the patient's tumor tissue, typically after surgery or biopsy. It stimulates the immune system to recognize and attack cancer cells. TSAs, proteins, or other molecules found only on cancer cells can help the body make an immune response against those cancer cells. Tumor-specific antigens may also be used in laboratory tests to help diagnose some types of cancer. Our tumor-specific antigen therapy can enhance the immune response to produce a specific antibody against the antigens your cancer cells are expressing.

Macrophage-Targeting Therapy - Macrophage-Targeting therapy is a next-generation immune system activator designed to harness the body's natural defenses against cancer by stimulating specific types of macrophage cells. These specialized cells innately fight cancer using a mechanism of action different from NK cells, lymphocytes, or dendritic cells. The therapy uses a protein that works through the vitamin D pathway to activate innate macrophage immune cells, enhance their anti-tumor immune responses, modulate the tumor microenvironment, reduce inflammation, and promote regeneration. When combined with other immunotherapies, it provides a complete therapy that engages the entire immune system in the effort to eliminate cancer.

Hyperthermia

Regional hyperthermia is used to heat up tumor material in a localized area, causing its metabolism to break down. Tumors are unable to dissipate heat easily, so they may weaken. Whole-body hyperthermia may be used to promote detoxification and stimulate the immune system. Both regional and whole-body hyperthermia may be combined with other modalities to enhance their effectiveness.

Oxygen Therapies

Medical-grade hyperbaric oxygen therapy (HBOT) and ozone therapy are used to improve oxygen delivery to all tissues, promoting healing and improving the microenvironment in the affected areas.

Nutrition Therapy

The Sanoviv diet is a mostly organic, whole foods-based plan that eliminates common food allergens (wheat/gluten, dairy), processed sugars, toxic fats, food additives, preservatives, caffeine, and alcohol. Diet is an integral part of cancer treatment as it helps enhance immune function, reduce inflammation, balance blood sugar, support digestion, and help with detoxification. At Sanoviv, we believe in biochemical individuality. Just as there is not one type of cancer, there is not one diet best for every cancer patient. We explore how your body responds to food and consider genetics, diet history, ancestral background, food preferences, and environmental interaction. Your nutritionist works with you to identify an enjoyable eating plan to keep you optimally nourished.

Psychology and the Mind-Body Connection to Health

Studies have shown that when a person's mental, emotional, and physical components are in balance, the individual moves into a more relaxed state, which promotes healing. In addition, chronic or trapped emotions can lead to disease and also block healing responses. When this happens, we experience higher stress levels. Stress can block the body's healing responses as your body focuses on surviving, not thriving. Psychology and mind-body therapies help to address these trapped emotions and promote balance and relaxation.

Bioenergetic Treatments

Most people are familiar with the physical body, which includes millions of biochemical reactions that can be affected by food, lifestyle, and medications. However, many people don't realize that we are also energetic beings with bodies that generate electricity. All living things generate electricity to sustain life. The elements in our cells carry electrical charges to send vital signals to different body parts. The heart is a prime example. Electricity and blood flow are essential to maintain function.

In our Bioenergetics Department, we use various tools and bioelectric therapies to restore balance and flow to the body's energetic systems. These tools use various modalities to accomplish this, including micro-currents, waves, light frequencies, and magnets. Bioenergetic therapies can support and increase the effectiveness of treatments done in other departments. This synergistic, whole-body approach to healing sets Sanoviv apart and contributes to the positive results that many people experience.

Fitness

Our bodies are designed for motion, which activates critical factors of health. When dealing with a severe and sometimes debilitating disease like cancer, some may feel that exercise is not a top priority. However, overwhelming evidence shows the benefits of balanced fitness in cancer treatment and prevention. Some studies show that exercise is an effective tool for improving fatigue symptoms, general quality of life, and physical functioning in cancer patients.

Research suggests that through exercise, breast cancer patients can reduce their mortality rate, whether or not the cancer was diagnosed early or after it had already spread. One study suggests that men who do strength training can lower their risk of death from a tumor by 30 to 40%. The most beneficial effect of exercise is lowering insulin levels, an essential factor in cancer prevention and treatment. Impaired insulin and blood sugar metabolism can play a major role in the onset of cancer.

Our fitness professionals work closely with Sanoviv doctors, nutritionists, and chiropractors to develop a specific plan that effectively aids your recovery. With this collaboration, we ensure that you receive all the benefits of movement without exceeding your individual capacity or risking injury.

Detoxification

Detoxification involves removing harmful substances (toxins) from our bodies. To improve immune function and reduce the side effects of some treatments, the body needs to eliminate heavy metals and toxins. Sanoviv treatments help open the body's detoxification pathways, improving metabolic function.

Since toxins are abundant in our air, food, water, clothes, furniture, and mouth (dental toxins), it's often difficult for the body to maintain optimal health. At Sanoviv, you are in a unique, low-toxin environment to enhance healing. Spa treatments, psychological sessions, diet, and bioenergetic detoxification treatments can help the body be more receptive to therapies. Detoxification is a foundational part of the Sanoviv Cancer Treatment program.

Additional Details

A specific number of diagnostics, therapies, and treatments are included in this program. Your medical team will select the most appropriate therapies and tests. Within the framework of the program, they may also adjust the number and duration of treatments based on your individual health assessment. If additional tests, treatments, or services that are not included are needed, you will be consulted before anything is ordered.

Occasionally, after your assessment, your medical team may recommend additional tests, therapies, or consultations not included in this program. These add-on services will only be ordered after being thoroughly explained to you obtaining your written approval.

- Specialized blood tests
- Imaging (MRI, PET)
- Surgical procedures
- Virotherapy
- Low dose chemotherapy
- Radiotherapy
- Certain medications and supplements that are not included*
- Emergency services
- Dental treatments and oral surgery
- Specialist consultations

This program is sold as a package, with no refunds or credits for items not received. Guests are treated according to their unique symptoms and needs within the program's parameters. The scenarios listed are examples of tests, medical treatments, and therapies included in this program. Some are only done if indicated by the doctor.

We encourage cancer patients to bring a companion for physical and emotional support. The cost for the companion is only \$100 per night (occupying the same room), which includes meals, juices, use of our pools, and group classes. Companions may purchase spa treatments based on availability.

At the end of your stay, your doctor recommends a “home program” which could include supplements, medications, or other treatments. The home program costs are not included in the program.

“I dream of a world free from the pain and suffering of degenerative disease. Share my vision. Love life and live it to its fullest in happiness and health.”

Dr. Myron Wentz
